Optoelectronics will undoubtedly play a major role in the applied sciences of the next century. This is due to the fact that optoelectronics holds the key to future communication developments which require high data transmission rates and of a extremely large bandwidths. For example, an optical fiber.

In the previous chapters we have presented advanced optoelectronic devices which performed a specific task: generation of coherent radiation, modulation, light detection or multi/demultiplexing. SPRINGER SERIES IN PHOTONICS Series Editors: T. Kamiya B. Monemar H. Venghaus The Springer Series in Photonics covers the entire field of photonics, including theory, experiment, and the technology of photonic devices.
