Klose,

Blood disorders can also affect the liquid portion of blood, called plasma. Treatments and prognosis for blood diseases vary, depending on the blood condition and its severity. A blood cell disorder is a condition in which theres a problem with your red blood cells, white blood cells, or the smaller circulating cells called platelets, which are critical for clot. Blood Diseases. Blood, which is essential for life, is composed of different types of cells with specific functions red blood cells transport oxygen through the body, white blood cells defend against infection and platelets help control bleeding. These cells are made in bone marrow, so well-functioning bone marrow is necessary for healthy blood. Note: Citations are based on reference standards. However, formatting rules can vary widely between applications and fields of interest or study. The specific requirements or preferences of your reviewing publisher, classroom teacher, institution or organization should be applied.

Types of blood disorders and its symptoms. Blood is a living tissue that carries essential nutrients all over the body parts. It is made of liquids and solids, liquid part is called as plasma which is made of salt, protein, and water.
